## Bulletin Volume 108-126

By University of Wisconsin. Station

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 174 pages. Dimensions: 9.7in. x 7.4in. x 0.4in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 edition. Excerpt: . . . is, generally speaking, safe to assume that a low protein content and a high crude-fiber content give evidence of adulteration. The main materials which are used for adulterating ground corn and oats are oat hulls, oat dust, corn bran, ground corn cobs, hominy feed, etc. , all of which, except the last feed given, are high in crude fiber and low in protein. Of the 50 samples analyzed this year, five samples are considered suspicious from the fact that they contained more than 7 per cent, of crude fiber and one is either adulterated or of very low graae. naving a crude fiber content of more than 9 per cent. The results of analyses of ground corn and oats made this year indicate a marked improvement in the character of the ground corn and oats sold in the state over that obtained in earlier...
